

Observing Meteors Comets Supernovae And Other Transient Phenomena The Patrick

By Patrick Moore

This book is a comprehensive guide to observing meteors, comets, supernovae, and other transient astronomical phenomena. It is written by Patrick Moore, one of the world's leading astronomers and science writers.

The book is divided into four parts. The first part covers the basics of observing, including how to choose a good observing site, what equipment you need, and how to use it. The second part discusses meteors, including how to find them, how to observe them, and how to record your observations. The third part covers comets, including how to find them, how to observe them, and how to predict their behavior. The fourth part covers supernovae and other transient astronomical phenomena, including how to find them, how to observe them, and how to interpret their data.
