

Property Value Capture Transport and Mobility: Unlocking the Transformative Power of Infrastructure

Transportation infrastructure is the backbone of modern society. It connects people, businesses, and communities, enabling economic growth and social progress. However, traditional funding mechanisms for transportation projects often fall short, leading to infrastructure deficiencies and missed opportunities for sustainable development.

Property value capture (PVC) offers a transformative approach to funding and managing transportation infrastructure. By capturing the increased property values generated by new transportation investments, PVC harnesses the power of infrastructure to create a virtuous cycle of economic growth, social equity, and environmental sustainability.

Benefits of Property Value Capture

- **Increased funding for transportation projects:** PVC provides a reliable and sustainable source of funding for transportation infrastructure, unlocking new investment opportunities and accelerating project delivery.
- **Reduced reliance on traditional funding sources:** PVC reduces the burden on taxpayers and traditional funding mechanisms, freeing up resources for other critical public services and community development initiatives.
- **Enhanced economic growth:** Transportation infrastructure improvements stimulate economic activity, creating jobs, attracting businesses, and boosting property values.
- **Improved social equity:** PVC can be designed to ensure that the benefits of transportation investments are shared equitably, providing access to affordable housing, mobility options, and community amenities for all.
- **Reduced environmental impact:** By promoting sustainable transportation modes and reducing congestion, PVC contributes to improved air quality, reduced greenhouse gas emissions, and a more livable environment.

Implementing Property Value Capture

Effectively implementing PVC requires a comprehensive approach that involves:

1. **Identifying value capture areas:** Delineating the areas where property values are likely to increase as a result of transportation investments.

2. **Establishing assessment mechanisms:** Developing fair and transparent methods to assess the value uplift generated by transportation projects.
3. **Capturing the increased value:** Implementing mechanisms such as special assessment districts, tax increment financing, or value capture bonds to collect the captured value.
4. **Reinvesting the captured value:** Using the captured funds to finance transportation projects and other community improvements that enhance the value of the area.

Case Studies

Numerous successful PVC initiatives demonstrate its transformative impact worldwide:

- **Vancouver, Canada:** The Canada Line light rail project captured \$2 billion in property value uplift, funding future transit expansions and creating a vibrant waterfront district.
- **London, United Kingdom:** The Crossrail project is expected to generate \$15 billion in property value capture, supporting the creation of new jobs and affordable housing units.
- **Hong Kong, China:** The West Kowloon Cultural District has used PVC to finance major cultural infrastructure projects, revitalizing the area and attracting international tourism.

The Path Forward

Property value capture is a powerful tool that can transform transportation infrastructure into a catalyst for economic growth, social equity, and

environmental sustainability. By harnessing the value created by transportation investments, we can create more livable and prosperous communities for generations to come.

To unlock the transformative power of Property Value Capture Transport and Mobility, we need to:

- **Promote awareness and education:** Increase understanding of PVC among policymakers, planners, and the general public.
- **Develop best practices:** Establish clear guidelines and standards for implementing PVC effectively and equitably.
- **Foster collaboration:** Encourage partnerships between transportation agencies, developers, property owners, and community stakeholders.
- **Invest in research and innovation:** Continue to explore new and innovative ways to implement and optimize PVC.

By embracing the transformative power of Property Value Capture Transport and Mobility, we can create a future where transportation infrastructure is a driver of sustainable development and a catalyst for a more prosperous and equitable society.

Call to Action

Join the movement to unlock the transformative power of Property Value Capture Transport and Mobility. Learn more about PVC, engage with stakeholders, and advocate for policies that support its implementation. Together, we can create a more sustainable, equitable, and prosperous future for our communities.
